

New York State Traffic Incident Management Training

-Created by Responders for Responders-

Traffic Incident Management

The process of coordinating resources for a number of different partner agencies and private sector companies to detect, respond to, and clear traffic incidents as quickly as possible to reduce the impacts of incidents on safety and congestion, while protecting the safety of on-scene responders and the traveling public.

- NYS Traffic Incident Management Plan

Training Objectives

- ◆ Responder safety
- ◆ Safe, quick clearance
- ◆ Prompt, reliable, and interoperable communications

Program Strengths

- ◆ Provides the tools for effective multi-agency, coordinated, and planned incident response
- ◆ Promotes responder safety
- ◆ Reduces congestion, collisions, and delays caused by secondary crashes
- ◆ A table top exercise enhances communication, coordination, cooperation, and consensus

Key to Success

The only way for this to effectively work is to have a set program that is used across the state to standardize Traffic Incident Management actions.

44%

Over 44% of police and firefighter line-of-duty deaths result from transportation related incidents.

1:4

For each minute a lane is blocked, an estimated 4 minutes of delay results after an incident is cleared.
